

Callaway Nine Spoke Wheel Packages

High strength. Light weight. Better control.

- Callaway Nine Spoke Wheels both feature a cast and flow-formed construction, providing a forged-strength aluminum alloy in the barrel with a cast spoke construction.
- Engineered to provide high structural stiffness with minimum weight, while retaining attractive, contemporary styling.
- Improved vehicle dynamics includes better response to braking input from high speed and reducing gyroscopic effect on steering feel.
- Designed specifically to resist plastic deformation when subjected to high road forces
- Nine Spoke Wheels are 2.0 lbs. lighter than stock, each. Reduced unsprung and rotating mass improves handling and ability for the suspension to control the wheel and tire assemblies.

*Original tires and tire pressure sensors are re-used. If new tires and/or tire pressure sensors are required, the purchaser will be notified and additional charges will be applied per market pricing.
