

Standard Width

for Callaway Corvette C8 and Corvette Stingray

Wide Body

for Callaway Wide Body C8 and Corvette Z06

Callaway Forged Nine-Spoke C8 Wheel Sets

- Refreshed Nine-Spoke design complements the Corvette's C8's styling.
- "Standard Width" wheels are 0.5" wider than OEM Corvette wheels, with offset configured for proper fit. "Wide Body" wheels provide maximum tire contact patch, while fitting entire wheel/tire package within Callaway C8 Wide Body, Corvette Z06 and E-Ray body envelopes.
- Forged aluminum construction offers greater strength with significantly less mass.
- Over 20% of rotational mass is removed, compared to the OEM Corvette wheels, improving overall performance:
 - Offers peace-of-mind against typical cast-wheel construction being prone to damage over poor road surfaces.
 - Less energy is required to accelerate, change direction, and decelerate the wheels.
 - Suspension performance is improved as it requires less work to maintain tire contact patch to the road surface.
 - Driver inputs are more efficiently communicated to the tires during acceleration, steering inputs and braking.
- Wheels have passed testing per TÜV and ISO standards for fatigue bending, impact and rolling performance.
- Two front wheels, two rear wheels, four carbon fiber center caps and lug nuts are included with each wheel set.
